

**Table S2.****Multilevel structural equation model**

Fixed slopes model with Bayes estimator				
	<i>B</i> ( <i>SD</i> )	95% CI <i>B</i>	<i>p</i>	$\beta$
<u>Within Subjects</u>				
Socially prescribed perfectionism	0.04 (0.02)	[0.001, 0.07]	.022	.04
Perfectionism cognitions	0.07 (0.02)	[0.03, 0.07]	.001	.06
Nondisplay of imperfection	0.36 (0.02)	[0.33, 0.39]	< .001	.48
Depressed mood	0.14 (0.01)	[0.11, 0.16]	< .001	.17
Day	0.00 (0.00)	[-0.005, 0.16]	.137	-.02
<u>Between Subjects</u>				
Socially prescribed perfectionism	-0.07 (0.04)	[-0.15, -0.01]	.014	-.11
Perfectionism cognitions	0.05 (0.05)	[-0.03, 0.14]	.118	.06
Nondisplay of imperfection	0.40 (0.03)	[0.35, 0.46]	< .001	.74
Depressed mood	0.37 (0.05)	[ 0.27, 0.47]	< .001	.29

*Note.* Day was measured at the within-subjects level only. Outcome = social anxiety; *B* = unstandardized path coefficients; *SD* = posterior standard deviation; CI = credibility interval; *p* = one-tailed *p*-value;  $\beta$  = standardized path coefficients.
