CONTENTS

- 295 Climate Change and Biodiversity Loss: Two Sides of the Same Coin** *Pamela McElwee*
Diminished biodiversity leaves ecosystems more vulnerable to climate change; protecting them also preserves their benefits to humanity, from crop pollination to water purification.
- 301 Carbon Removal to the Rescue?** *Simon Nicholson*
Schemes to draw carbon dioxide out of the atmosphere could be part of the solution to climate change, if they prove technically feasible and come with strong environmental and social protections.
- 307 The Business of Climate Transformation.** *Peter Newell*
A fundamental rewiring of the global economy will be necessary to end fossil fuel use in time to stave off a devastating “hothouse earth” scenario.
- 313 A Path to Sustainable Food Systems.** *Jessica Fanzo*
Environmentally unsustainable agricultural practices also have a negative effect on dietary health. Holistic food policies could ameliorate both climate change and malnutrition.
- 320 Climate Disaster Risk, Disability, and Resilience** *Emma Calgaro*
Including people with disabilities in shaping disaster risk reduction and climate adaptation processes is essential for equitable, effective policies. *Third in a series on disability rights around the world.*
- PERSPECTIVE**
- 326 Violent Silence: The Erasure of History and Justice in Global Climate Policy.** *Prakash Kashwan and Jesse Ribot*
If they do not address historically rooted causes of the inequalities that push people into a precarious state in the first place, climate policymakers could make things worse for the most vulnerable.
- BOOKS**
- 332 A Case for Extreme Climate Action** *Keith Makoto Woodhouse*
A camp philosopher of the climate movement argues that pipeline sabotage is a morally legitimate option to force urgently needed policy changes that nonviolent protests have failed to elicit.
- FROM THE ARCHIVES**
- 336 Ideas Matter: A Political History of the Twentieth-Century Environment** *J.R. McNeill*
Excerpts from an essay published in *Current History* two decades ago.
