Vol. 122, No. 847

CONTENTS

- 283 Enzyme Power** *Hannah Landecker*
The little-noticed proteins that catalyze crucial biochemical reactions have become ubiquitous in cleaning products—and now are being enlisted to remediate pollution on a global scale.
- 289 Nature without Conservation** *Krithika Srinivasan and Rosemary Collard*
The imperative to conserve the world's natural heritage is rooted in the pursuit of development. This entanglement can lead to efforts that end up harming the animals they are meant to save.
- 295 China's Ecological Engineering in the Anthropocene** *Annah Lake Zhu*
Preserving nature is not a priority of Chinese-style environmentalism. Its large-scale interventions and use of natural resources are finding a receptive audience in the global South.
- 301 Interspecies Relations in the Midst of the Russia–Ukraine War** *Tanya Richardson*
The Russian invasion has inflicted immense ecological damage on Ukraine. Scientists, nature reserve managers, and beekeepers have worked in dangerous conditions to salvage what they can.
- 308 The Japanese Pursuit of Human–Robot Companionship** *Hirofumi Katsuno and Daniel White*
Once regarded as curiosities, robots designed to bring comfort to humans with an array of emotion-sensing abilities are increasingly being deployed to address social needs in Japan.
- PERSPECTIVE**
- 314 Chasing Extraterrestrial Intelligence** *J. W. Traphagan*
Decades-long efforts to make contact with aliens have proved fruitless, but the search continues—as does debate over the wisdom of reaching out to unknown potential interlocutors.
- BOOKS**
- 317 Saving Nature and Ourselves** *Keith Makoto Woodhouse*
A political theorist argues that pressure from above and below to fulfill collective responsibilities can help emancipate both humans and the natural world from destructive exploitation.
